Subject: labeling of bio-tech foods

3030 '99 MAY 12 19:46

President Clinton,
Upon recently hearing small bits of information about genetically engineered crops, I began research into the matter for my own edification. I became apalled and greatly concerned with what I learned.
As a longtime user of soybean food products, I am angry beyond words with the creation, and already unbeknown to the public, in many of our foods, the so called "Ready Roundup Soybean. As just one of many questions I have, please tell me how a Ready Roundup Soybean can be considered "substantually equivalent" to a traditional cross bred soybean when one is resistant to the TOXIC herbicide Roundup?
Myself, family and friends request that the FDA immediately mandrate labeling of all genetically engineered foods that we the public, may make a conscious decision as to what we put into our bodies. We wish the choice to not have our bodies used for this mostly untested technology.
I sincerely appreciate hearing from your office on this matter. Thank you for your time.
Sincerely,
Neva Anderson
